## Introduction

The national financial accounts present the volume and breakdown of the financial assets and liabilities held by the different sectors of the economy (stocks) as well as the financial transactions (flows).

The financial accounts form part of Switzerland's system of national accounts. The methodological basis is provided by the European System of National and Regional Accounts 1995 (ESA95), thereby ensuring their compatibility with both the national accounts compiled by the Swiss Federal Statistical Office (SFSO) – which reflect the real part of the Swiss economy – and the financial accounts of the EU countries. The financial accounts represent a synthesis of data drawn from a number of different statistical sources. The final result is an overall system of financial accounts. They are compiled by a joint working group comprising representatives of the Swiss National Bank (SNB) and the SFSO, under the leadership of the SNB.

The financial accounts form the basis for a wide range of economic analyses. They also supplement the data used by the SNB for monetary policy decisions and the analysis of financial system stability.

This edition of the financial accounts also contains, for the first time, data on financial transactions for financial corporations and the rest of the world (deposits, loans and insurance technical reserves). No transaction data for securities (debt securities, shares, units in collective investment schemes and structured products) are available yet for either of these sectors.

The tables in this publication cover the years 2003 to 2007. Data as of 1999 are available on the SNB website ([www.snb.ch](http://www.snb.ch), *Publications, Swiss Financial Accounts*). The fact that some of the statistical sources are only available after a considerable time lag explains the relatively long delay in publishing the financial accounts. More recent data taken from the financial accounts in the *Household Wealth* publication are used for the households sector, supplemented by data on real estate assets ([www.snb.ch](http://www.snb.ch), *Publications, Household Wealth*).

The first part of this publication outlines the main results, while the second part presents them in more detail and in tabular form. The third part is devoted to an explanation of the methodology used in drawing up the accounts.

## Notes on the results

As an introduction to the Swiss financial accounts, chart 1 and table 1 provide an overview of stocks of financial assets and liabilities for the different sectors, as well as the net financial asset position for these sectors. The data show that net financial assets held by private households are high, with financial assets considerably exceeding liabilities. Claims against insurance corporations and pension funds (insurance technical reserves) make up the largest component of households' financial assets. For non-financial corporations, by contrast, liabilities are substantially higher than financial assets. These corporations use equity capital and borrowed capital to finance a high level of non-financial assets, which are not, however, included in the financial accounts. General government (central government, cantons, municipalities and social security funds) also shows net finan-

cial liabilities. However, the figure is considerably lower than in the case of non-financial corporations. The financial corporations sector comprises the Swiss National Bank (SNB), commercial banks, collective investment schemes, finance and asset management companies, insurance corporations and pension funds. Due to the fact that these institutions perform an intermediary role, stocks of financial assets and liabilities in this sector are higher than those of any other sector, while at the same time the difference between assets and liabilities is small. The level of financial assets and liabilities for the rest of the world is high. This reflects the highly globalised nature of the Swiss economy.

The following sections provide a more detailed breakdown of the financial assets and liabilities in the different sectors, and outline significant movements in the figures.

<sup>1</sup> Standardised debt certificates that combine the properties of two or more financial instruments, thus forming a new investment product (participation, yield enhancement and capital protection products). Structured finance products (asset-backed securities, collateralised debt obligations and similar products), for which the financing purpose or risk transfer is of central importance, are recorded as debt securities.

## Households

In 2007, net financial assets of the households sector<sup>1</sup> increased by CHF 27 billion to CHF 1,303 billion. The rise was considerably smaller than in 2006. This was mainly due to movements in stock markets and exchange rates. While households had recorded high capital gains in 2006, they ended 2007 with slight capital losses, as a result of falling prices for domestic shares and Swiss franc bonds, as well as the weakening of the US dollar against the Swiss franc. The increase in net financial assets was thus solely due to savings, an area in which households are traditionally very active.

On the assets side, insurance technical reserves saw the largest increase, rising by CHF 18 billion to CHF 811 billion. This was largely attributable to contributions made to occupational pension schemes. In addition, households continued to purchase units in collect-

ive investment schemes and structured products. Collective investment schemes climbed by CHF 15 billion to CHF 225 billion, while the stock of structured products rose by CHF 8 billion to CHF 51 billion. Investment in debt securities also increased by CHF 8 billion, reaching a level of CHF 121 billion. Holdings of shares, meanwhile, slipped by CHF 9 billion to CHF 253 billion, due not only to valuation losses but also to the fact that households once again sold more shares than they purchased. Deposits with banks and PostFinance remained unchanged (CHF 456 billion). Overall, total financial assets held by households grew by CHF 40 billion to CHF 1,917 billion.

Households' liabilities rose by CHF 13 billion to CHF 614 billion. Most of these were mortgages, which increased by CHF 17 billion to CHF 565 billion.

### Non-financial corporations

Once again, the financial assets and liabilities of non-financial corporations increased substantially. This was related to the continued strength of the economy in 2007. On the one hand, the good earnings position resulted in an inflow of funds. On the other, investment in machinery, equipment, buildings and structures again rose, and many companies borrowed additional funds for this purpose.

Non-financial corporations' financial assets grew by CHF 116 billion to CHF 933 billion. Shares and other equity accounted for the largest portion of this increase. They rose by CHF 55 billion to CHF 464 billion, mainly due to the acquisition of participations abroad. Loans to affiliated companies and third parties abroad increased

by CHF 40 billion to CHF 194 billion. As a result of the corporations' good earnings position, deposits advanced by CHF 14 billion to CHF 174 billion. Debt securities increased by CHF 5 billion.

Non-financial corporations' liabilities were up by CHF 148 billion to CHF 1,509 billion. Loans grew by CHF 60 billion to CHF 342 billion. Unlike previous years, when it was only loans from abroad that grew, 2007 saw a considerable proportion of loan growth originating from domestic banks (CHF 27 billion). Approximately two-thirds of the liabilities were accounted for by share capital (market value), which grew by CHF 84 billion to CHF 1,068 billion, mainly due to increasing share prices for non-financial corporations.

Chart 3

#### Financial wealth of non-financial corporations

## General government

The financial assets of general government (central government, cantons, municipalities and social security funds) rose in 2007 by CHF 15 billion to CHF 196 billion. Liabilities fell by CHF 4 billion to CHF 242 billion. Net financial liabilities declined by CHF 20 billion to CHF 46 billion. This fall was attributable to an income surplus achieved by central government, cantons and municipalities, as well as capital gains.

On the assets side, shares and other equity recorded the greatest increase (CHF 7 billion). This was mainly attributable to movements in central government and cantonal claims against the SNB. This figure comprises claims to SNB reserves not required for monetary policy, which rose because of movements in the price of gold.

As a result of the good financial results, liabilities from short-term securities dropped by CHF 4 billion while those from long-term securities were reduced by CHF 2 billion. In addition, loans amounting to CHF 5 billion were repaid. Moreover, the market value of liabilities from long-term securities (the figure which is relevant for the financial accounts) fell by CHF 5 billion due to price movements. Other accounts payable increased by CHF 11 billion.

In spring 2007, the central government transferred to the Old Age and Survivors' Insurance Fund (AHV/AVS) its share of CHF 7 billion of the proceeds from the sales of SNB gold reserves. In the financial accounts, this transfer of assets had a negative impact on the net financial position of central government and a positive impact on that of social security funds. However, it had no impact on the net financial position of the general government sector as a whole.

Chart 4

## Financial corporations

Financial corporations' financial assets rose by CHF 593 billion to CHF 4,552 billion. The greatest increase was recorded by deposits (CHF 269 billion), mainly as a result of cross-border interbank business. Loans grew by CHF 134 billion to CHF 1,369 billion. Net new loans granted to domestic borrowers by commercial banks totalled CHF 58 billion, of which about half went to non-financial corporations. Loans granted by commercial banks abroad rose by CHF 41 billion. Units in collective investment schemes held by financial corporations rose by CHF 96 billion to CHF 451 billion. Insurance corporations and pension funds played the most important role in this development (CHF 54 billion). Funds flowing into collective investment schemes were largely invested in debt securities. Insurance corporations and pension funds also stepped up their investments in debt securities considerably. Overall, debt securities held

by financial corporations rose by CHF 55 billion to CHF 739 billion. Shares and other equity increased by CHF 16 billion to CHF 772 billion.

Financial corporations' liabilities climbed by CHF 448 billion to CHF 4,450 billion. The largest component of liabilities are deposits. Overall, these expanded by CHF 328 billion to CHF 1,902 billion. As in the case of assets, the increase was largely attributable to interbank business (CHF 294 billion). Deposits from domestic customers rose by CHF 20 billion, while deposits from customers abroad remained almost unchanged. Insurance technical reserves rose by CHF 26 billion to CHF 935 billion. Liabilities from issuance of units in collective investment schemes increased by CHF 89 billion to CHF 513 billion. Financial corporations' liabilities in the form of shares and other equity declined by CHF 47 billion to CHF 582 billion. This was mainly due to the fall in commercial bank share prices.

Chart 5a  
Financial assets of financial corporations,  
by financial instrument

Chart 5b  
Liabilities of financial corporations,  
by financial instrument

## Rest of the world

Total domestic claims against the rest of the world rose by CHF 554 billion to CHF 3,586 billion (Swiss financial assets are stated as liabilities of the rest of the world in the tables to the financial accounts and in chart 1). Movements in cross-border interbank business were reflected in an increase in deposits by CHF 239 billion to CHF 886 billion. Loans abroad rose by CHF 117 billion to CHF 626 billion (loans by commercial banks up CHF 41 billion, loans by corporations up CHF 76 billion). Debt securities increased by CHF 68 billion to CHF 651 billion, above all because the transactions by domestic collective investment schemes and by insurance corporations and pension funds (cf. the previous section) predominantly concerned foreign-issued instruments. Shares and other equity rose by CHF 65 billion to CHF 991 billion. Units in collective investment schemes advanced by CHF 39 billion to CHF 293 billion.

Swiss liabilities with respect to the rest of the world amounted to CHF 2,839 billion, an increase of CHF 397 billion (reported in the tables and in chart 1 as financial assets held by the rest of the world). Here too, the result was decisively affected by interbank business, with deposits recording an increase of CHF 276 billion to CHF 973 billion. Loans from the rest of the world to domestic corporations increased by CHF 47 billion to CHF 328 billion. Liabilities in the form of shares and other equity rose by CHF 33 billion to CHF 1,075 billion (the rest of the world holds more than half of shares issued by Swiss borrowers). Units in collective investment schemes advanced by CHF 13 billion to CHF 94 billion.

Swiss claims against the rest of the world exceeded liabilities by CHF 747 billion, as compared with CHF 590 billion in 2006.

## 1. Methodological basis

The financial accounts form part of Switzerland's system of national accounts. They are compiled in accordance with the European System of National and Regional Accounts 1995 (ESA95), as is the non-financial part of the national accounts, which is published by the Swiss Federal Statistical Office (SFSO). ESA95 is based on the United Nations' 1993 System of National Accounts, although it focuses more on the circumstances and data requirements in Europe.

Complete financial accounts based on ESA95 provide information on the volume and structure of financial assets and liabilities that link the different sectors of the domestic economy, as well as the domestic economy and the rest of the world. They also detail financial transactions and show the revaluation of items based on exchange rate fluctuations and changes in the valuation of securities.

Financial assets and liabilities are classified by financial instrument and are valued, in principle, at market prices. Because the financial accounts are a complete system of accounts, each financial asset is matched by a counterpart liability. The only exceptions to this are monetary gold and the central bank's special drawing rights in the International Monetary Fund (IMF), which are only shown on the asset side under ESA95.

### Sectors

All economic agents (or parts thereof) whose economic interests are focused mainly in Switzerland are listed within the domestic part of the national accounts, which comprises four institutional sectors (non-financial corporations, financial corporations, general government, households and NPISHs). A fifth sector highlights the relationships between domestic and foreign agents. The sectors are described below (ESA codes in brackets):

Non-financial corporations (S.11)	Corporations, partnerships and sole proprietorships which provide the market with goods and non-financial services as their principal activity. Non-financial corporations also include public enterprises – such as Swiss Federal Railways (SBB/CFF) and Swiss Post – that sell their products on the market.
Financial corporations (S.12)	Corporations and partnerships which are principally engaged in financial intermediation (financial intermediaries) or in auxiliary financial activities (financial auxiliaries). This sector is divided into five sub-sectors. These include the Swiss National Bank (S.121) and commercial banks (S.122), although the latter sub-sector comprises solely the financial assets and liabilities of bank offices in Switzerland. Swiss investment funds, mortgage bond institutions and other finance companies, in particular those operating in the area of long-term financing, are recorded under other financial intermediaries (S.123). Given the availability of data for Switzerland, the ESA95 financial auxiliaries sub-sector (S.124) is currently recorded together with other financial intermediaries. In Switzerland, the insurance corporations and pension funds sub-sector (S.125) covers life insurance, non-life insurance and reinsurance companies – which are supervised by the Swiss Financial Market Supervisory Authority (FINMA) – as well as the Swiss Accident Insurance Fund (Suva), health insurance companies and pension funds.
General government (S.13)	Institutional units that provide the general public with non-market goods and services and are primarily engaged in redistributing income or national wealth, as well as social security funds. The general government sector is subdivided into four sub-sectors comprising central government (Swiss Confederation) (S.1311), cantons (S.1312), municipalities (S.1313) and social security funds (S.1314). The central government sub-sector includes not only the Swiss Federal Administration, but also the Swiss Alcohol Board, the fund for large-scale railway projects and the Swiss Federal Institutes of Technology (ETH Zurich/EPFL). The Swiss social security funds comprise old age and survivors' insurance (AHV/AVS), disability insurance (IV/AI), the fund for loss of earned income (EO/APG), unemployment insurance (ALV/AC) and maternity insurance in the canton of Geneva.

Households and NPISHs (S.14 + S.15)	Individuals in their function as consumers (employed, economically inactive and retired persons, as well as students and children) and self-employed persons. Non-profit institutions serving households (NPISHs) are also covered by this sector. These non-market producers include, for example, relief organisations, churches, trade unions, political parties and recreational clubs.
Rest of the world (S.2)	Incorporating all foreign (non-resident) units which effect transactions with domestic (resident) units or have financial claims against or liabilities towards domestic units. Financial assets and liabilities are classified from the perspective of the foreign units.

#### Comments on the demarcation between the domestic part of the accounts and the rest of the world

It should be noted that, in the Swiss financial accounts, all branches and subsidiaries of international Swiss banks outside Switzerland are allocated to the rest of the world. This means that the portfolio of securities stated for commercial banks in the financial accounts is considerably smaller than the total commercial and financial holdings of Switzerland's banking groups. It should also be mentioned that a significant proportion of the collective investment schemes sold in Switzerland form part of investment funds which, although they belong to Swiss banking groups, are domiciled in Luxembourg. If, for instance, a domestic household invests in a Luxembourg fund holding Swiss-issued shares, the 'collective investment schemes' financial instrument will show domestic claims against the rest of the world (liabilities on the part of the rest of the world), while the 'shares' financial instrument will show claims on the part of the rest of the world against Switzerland. Units in investment funds held by the rest of the world that have been issued by funds domiciled in the rest of the world do not appear in the financial accounts.

#### Valuation

ESA95 requires that all financial assets and liabilities be valued at the market prices applicable on the date to which the balance sheet relates. In cases where no market price is observable, an estimate should be made. In the case of non-tradable instruments, such as deposits, the nominal value often corresponds to the market price. Accrued returns, such as interest or dividends, should be added to the value of the relevant financial instrument or recorded under other accounts receivable or payable. Detailed descriptions can be found in the notes on the individual financial instruments.

#### Financial instruments

The financial accounts divide up the financial assets and liabilities into different financial instruments. The division is based primarily on liquidity and legal criteria. The financial accounts use a broad definition of the terms financial assets and liabilities; these include not only direct relationships between creditors and debtors, but also shares and other participating interests. The individual financial instruments are described in greater detail below (the ESA code is given in brackets). Given that the statistical sources do not always correspond to the requirements of ESA95, deviations cannot be ruled out in individual cases.

Monetary gold and special drawing rights (AF.1)	This category comprises the gold that is held by the monetary authorities as part of reserve assets and the special drawing rights (SDRs) created by the IMF. Both categories should be recorded at current market prices. Monetary gold and SDRs are the only financial assets with no counterpart liability.
Currency and deposits (AF.2)	This category includes notes and coins in both the national currency and foreign currencies, transferable deposits, and other deposits which cannot be used to make payments at any moment and which cannot be converted without any kind of significant restriction or penalty. These holdings are stated at nominal value.
Debt securities (AF.33)	This category covers bonds and debentures in the form of certificated and uncertificated securities which can be traded in secondary markets, but do not grant the holder any ownership rights in the institute issuing them. These securities are classified on the basis of their original maturity as either short-term securities, whose original maturity is one year or less, or long-term securities, whose original maturity is more than one year, both of which are valued at market prices. Structured products are recorded under a separate category.

Loans (AF.4)	<p>This category includes interest-bearing loans not evidenced by documents (excluding trade credits). The distinction between transactions in loans and those in deposits is determined by the initiating party of the transaction. Contrary to deposits, transactions in loans are generally initiated by the borrower (debtor). Financial assets and liabilities from interbank business are listed entirely under deposits. The values to be recorded in the financial accounts are the amounts of principal that the debtors are contractually obliged to repay the creditors.</p>
Shares and other equity (AF.5)	<p>In economic terms, this category represents ownership rights, thus generally entitling the holders to a share in the profits and to a share in the net assets in the event of liquidation. Both of the sub-categories – shares and other equity (excluding collective investment schemes) (AF.51) as well as units in collective investment schemes (AF.52) – are recorded separately. The first category includes quoted and unquoted shares (including shares in investment companies), dotation capital of non-resident affiliates, shares in limited companies, capital invested in general and incorporated partnerships, as well as cooperatives. Units in collective investment schemes (A.52) mainly comprise units in investment funds; however, they also include units in collective investment schemes for qualified investors, such as units in investment trusts, vested benefit foundations, pension foundations and special internal bank assets.</p> <p>Shares and collective investment schemes should be either recorded at their market prices or estimated, should such prices not exist. Other equity should generally be valued according to specific methods, for instance, using equity or nominal value. Due to the nature of the data available, the Swiss valuation of participating interests deviates from the principles enshrined in ESA95. Figures for participating interests abroad are taken from direct investment statistics and therefore correspond to subsidiaries' equity capital (including reserves). Participating interests in Switzerland held by banks are stated at book value as entered in bank balance sheets. Participating interests held by central government are valued in a number of different ways. The figure stated for Swisscom is its market value; those stated for the Ruag technology group, SBB/CFF and Swiss Post are the equity capital in each case (including reserves); for other participating interests the amount stated is the book value, as entered in the central government accounts.</p>
Insurance technical reserves (AF.6)	<p>This category covers the provisions of insurance corporations and pension funds against future claims from policyholders and beneficiaries. It is divided into two sub-categories: net equity in life insurance reserves and pension fund reserves (AF.61) and prepayments of insurance premiums and reserves for outstanding claims (AF.62).</p> <p>AF.61: This item consists of insurance technical reserves set aside by life insurance corporations and pension funds, which serve to ensure that the foreseen pension benefits can be satisfied. These provisions are recorded as net equity in life insurance reserves and pension fund reserves.</p> <p>AF.62: Prepayments of insurance premiums represent that part of gross premiums written which have been allocated to the following accounting period. These prepayments result from the fact that insurance premiums generally fall due at the start of the period covered by the insurance policy, and that this period does not normally coincide with the accounting period itself. In other words, this amount is intended to cover risks in the subsequent year. Reserves for outstanding claims are held by insurance corporations to cover the amounts they expect to pay out in respect of claims that have not yet been settled, for example, because they are still disputed.</p> <p>All aforementioned categories are calculated according to actuarial criteria.</p>
Financial derivatives (AF.34)	<p>This category comprises those derivatives which have a market value and are thus tradable or can be offset on the market. This is because ESA95 stipulates that only such derivatives are to be considered as financial assets or liabilities. Financial derivatives should be recorded at their relevant market prices or at the amount required to buy out or offset the contract.</p>

Structured products (-)	This category comprises standardised debt certificates that combine the properties of two or more financial instruments, thus forming a new investment product (participation, yield enhancement and capital protection products).
Other accounts receivable/payable (AF.7)	This category consists of financial assets and liabilities which are created in cases where there is a time lag between a transaction and the corresponding payment. This includes both trade credits that arise from the direct extension of credit by suppliers to buyers for goods and services transactions (debtors/creditors), as well as advance payments for work that is in progress and for the delivery of goods and services. Also included in this category are obligatory payments, such as taxes, social contributions, wages and salaries, issue discounts or premiums, and dividends. The value to be recorded is the amount that the debtors are contractually obliged to pay when the obligation is extinguished. Consequently, this category is not a residual item to which all financial assets and liabilities that are difficult or impossible to classify can be allocated.
<b>Balancing items</b>	
Net financial assets	The net financial assets figure corresponds to the stock of financial assets less the liabilities. When interpreting the net financial assets figure for corporations, it should be borne in mind that share capital is always counted under liabilities in the financial accounts.
Net lending/ net borrowing	The figure for net lending/net borrowing corresponds to the sum of transactions under financial assets less the sum of transactions under liabilities. Theoretically, the figure for net lending/net borrowing stated in the financial accounts should correspond to the equivalent figure stated in the national accounts drawn up by the SFSO. In the national accounts, the net lending/net borrowing figure is derived from the difference between savings and investment. In practice, however, the two net lending/net borrowing figures diverge due to differing source data and certain gaps in the data.

## 2. Notes on the Swiss Financial Accounts

At present, the stocks of financial assets and liabilities of all sectors as well as the transaction data for three sectors (households, non-financial corporations and general government) are recorded in the Swiss financial accounts. Transaction data for financial corporations and the rest of the world are due to be published in 2009. In the event of modifications to the methodology or revisions to the statistical sources, the data for the entire time period will, in principle, be revised.

### 2.1 Changes from the previous year

#### Transactions by financial corporations and the rest of the world

For the first time, transaction data for financial corporations and the rest of the world (deposits, loans and insurance technical reserves) are included (data as of 2000).

### 2.2 The financial accounts as a synthesis of data

The financial accounts represent a synthesis of data, with the necessary statistics being drawn from a number of different sources. These sources generally serve other purposes and many of them are compiled according to different principles. Globally speaking, almost no statistical data are compiled solely for the financial accounts, with the result that the data need to be reworked before they can be used for this purpose. The fact that the financial accounts are dependent upon various different data sources also explains the relatively long delay in publishing the financial accounts.

The most important statistical sources in Switzerland are bank balance sheets, securities survey statistics (securities holdings in bank custody accounts in Switzerland), the balance sheets of insurance corporations and pension funds, direct investment statistics, statistics on corporations' foreign assets and liabilities, statistics on public finances and financial market data. The suitability of the existing statistical sources with respect to the data requirements for the financial accounts varies from one source to another. The statistical sources are satisfactory as regards the financial relationships between the various sectors and the banks in Switzerland, as well as the corporations' financial relationships with the rest of the world. Areas with data gaps include the shares of small and medium-sized enterprises as well as trade credits. In addition, data for municipalities are incomplete. As a result of these gaps, a number of items have been underestimated.

#### Types of data source

Four different types of data source are used in the compilation of the financial accounts. The first source type – sector statistics – provides information on the financial assets and liabilities of the surveyed sectors (direct data). A prime example of this are bank balance sheets, which cover all financial assets and liabilities of commercial banks in Switzerland. Cross-sector statistics, as the second type of source, allow conclusions to be drawn regarding several sectors not directly surveyed (indirect data). A key source within this category are the securities survey statistics. A third source of data is provided by statistics which reveal the party with respect to which claims or liabilities are still outstanding (counterparty information). An example of this is the sectoral classification of bank balance sheets. The advantage of these statistics is that they can be used to compile the counterparties' financial assets and liabilities. All bank assets can be recorded as a liability in the corresponding borrower category and every liability represents an asset in the creditor category. This type of data source is particularly important for sectors with no direct sources. The fourth method of calculating certain figures for individual sectors involves making use of the identities applicable in the financial accounts. For each financial instrument, for instance, total claims against domestic borrowers must be equal to total domestic sector liabilities. This method is particularly useful when calculating liabilities in the form of debt securities as well as shares and other equity.

#### Consolidation

ESA95 allows for financial accounts to be drawn up in a consolidated or in a non-consolidated form. If they are consolidated, financial assets and liabilities within an individual sector must be set off against one another. At present, the data in the Swiss financial accounts are recorded in the same manner as in the statistical sources. In other words, most are not consolidated.

## 2.3 Procedure for individual sectors

As previously explained, different statistical sources are used in the compilation of the financial accounts. Given that availability of data varies from one sector to the next, the following gives a description of the methods used for each individual sector.

### Non-financial corporations (S.11)

Data for the non-financial corporations sector were taken from cross-sector statistics and counterparty information. With the exception of figures for the PostFinance postal accounts, there are no direct data on the financial assets and liabilities of non-financial corporations.

Financial assets	
Currency (AF.21)	Cash held by Swiss Post, and denominated in Swiss francs, as per the Swiss Post annual report. Cash held by other non-financial corporations, and denominated in Swiss francs, as per SNB estimate (cf. section 2.4).
Transferable deposits (AF.22)	Transferable deposits with commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Transferable deposits with PostFinance, as per SNB estimate.
Other deposits (AF.29)	Other deposits with commercial banks in Switzerland and fiduciary investments abroad, as per sectoral classification of bank balance sheets. Other deposits with PostFinance, as per SNB estimate.
Short-term debt securities (AF.331)	Money market paper issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Long-term debt securities (AF.332)	Medium-term bank-issued notes and bonds issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Bonds issued by foreign borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position.
Loans (AF.4)	Loans to associates and third parties abroad, as per surveys on the balance of payments and the international investment position.
Shares and other equity (AF.51)	Portfolio investment: Shares and participation certificates of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Equity securities issued by foreign borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position. Participating interests: Participating interests abroad, as per surveys on the balance of payments and the international investment position.
Units in collective investment schemes (AF.52)	Units in collective investment schemes of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Prepayments of insurance premiums and reserves for outstanding claims (AF.62)	The compilation of this item is outlined in the insurance corporations and pension funds sub-sector (S.125), under the appropriate category.
Structured products (-)	Structured products of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics (data as of 2005).

<b>Liabilities</b>	
Transferable deposits (AF.22)	Transferable deposits with PostFinance (postal accounts), as per the Swiss Post annual report.
Other deposits (AF.29)	Other PostFinance liabilities (Deposito accounts, investment accounts, time deposits), as per the Swiss Post annual report.
Short-term debt securities (AF.331)	Non-financial corporation liabilities from short and long-term debt securities are recorded as a residual value. The calculation process takes as its point of departure the fact that, in the financial accounts, the sum of all debt securities issued by domestic borrowers and held by the different sectors is identical to the sum of securities issued by domestic borrowers. Less the securities issued by financial corporations and general government gives a residual value which is considered a liability of non-financial corporations.
Long-term debt securities (AF.332)	
Loans (AF.4)	Loans by commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Loans by associates and third parties abroad, as per surveys on the balance of payments and the international investment position.
Shares and other equity (AF.51)	The compilation of this item is explained in section 2.5.
Other liabilities (AF.7)	Net liabilities of non-financial corporations towards general government, as per SNB estimate.

Transaction data for non-financial corporations: On the financial assets side, transactions are generally estimated using the changes in stocks. Revaluations resulting from market price and exchange rate movements are also taken into account. Transaction data for participations abroad and loans to associates abroad are taken from the surveys on the balance of payments and the international investment position. On the liabilities side, transactions in long-term debt securities and in portfolio investment in the form of shares are calculated using SNB capital market statistics. Transaction data for foreign participations in corporations in Switzerland and for loans from associates abroad are taken from the surveys on the balance of payments and the international investment position. Transactions in other loans and in deposits with PostFinance are calculated using the changes in stocks.

### **Financial corporations (S.12)**

In principle, the financial assets and liabilities of financial corporations correspond to the sum of the financial assets and liabilities of the sub-sectors. The liabilities in the form of shares and other equities are the only exception – given the availability of data, they can only be estimated for the sector as a whole (cf. section 2.5).

### **Swiss National Bank (S.121)**

All Swiss National Bank (SNB) financial assets and liabilities are recorded in this sub-sector. The figures on stocks of financial assets and liabilities are taken from the *Annual Report* and entered in the correct categories, in some cases with the aid of additional data from the SNB's central accounting unit. Transactions are calculated on the basis of changes in stocks, internal turnover data and the SNB's income statement.

### **Swiss National Bank equity capital**

The SNB is a special-statute joint-stock company listed on the stock exchange. Under the National Bank Act, the dividend may not exceed 6% of the SNB's nominal equity capital of CHF 25 million. Irrespective of share ownership, central government and the cantons are entitled to the remaining net profit. Consequently, the capitalisation on SIX Swiss Exchange reflects the heavily restricted property rights of the shareholders. The distribution reserve, annual result and provisions for reserve assets must also be taken into account. This last item relates to statutory provisions with equity capital character.

Based on the National Bank Act, the distribution reserve and the annual result (after allocation to the provisions for reserve assets) represent equity claims on the part of central government (one-third) and the cantons (two-thirds). They are entered in these sub-sectors as claims against the SNB, and recorded in the SNB sector under shares and other equity. For the calculation of transactions under this last item, the SNB's distributions to central government and the cantons are divided into property income and capital repayments. According to the *ESA95 manual on government deficit and debt*, a supplement to ESA95, the relationship between the distributions and the result of the SNB is relevant for the manner in which they are recorded in the accounts. In this respect, two different cases should be distinguished. First, if the distribution is smaller than the SNB's year-earlier result (not including capital gains and

losses), the total amount is stated outside the financial accounts as property income of central government and the cantons. Second, if the distribution is higher than the SNB's year-earlier result, the amount of the result is stated as property income. The amount exceeding the result is regarded as a capital repayment and entered in the financial accounts as a financial transaction.

ESA95 makes no explicit mention of how provisions for reserve assets are to be handled in the accounts. However, this is outlined in the *ESA95 manual on government deficit and debt*. Reserve assets are deemed to be owned by the public, which is represented by general government in the financial accounts. In Switzerland, however, it is not clear to which sub-sector of government the provisions for reserve assets should be allocated (central government, cantons, municipalities or social security funds). For this reason, there is no entry for this item under general government financial assets and SNB liabilities in the financial accounts.

### Commercial banks (S.122)

The balance sheets of bank offices in Switzerland form the key source of data for commercial banks' financial assets and liabilities. Other sources are used for certain items.

Financial assets	
Currency (AF.21)	Cash denominated in Swiss francs and other currencies, as per bank balance sheets.
Transferable deposits (AF.22)	Transferable deposits with the SNB, as per the <i>SNB Annual Report</i> . Transferable deposits with other institutions, as per bank balance sheets.
Other deposits (AF.29)	Claims against the SNB (excluding transferable assets), as per the <i>SNB Annual Report</i> . Claims against domestic and foreign commercial banks (including mortgage claims), as per bank balance sheets.
Short-term debt securities (AF.331)	Money market paper issued by domestic and foreign borrowers, as per bank balance sheets.
Long-term debt securities (AF.332)	Bonds issued by domestic and foreign borrowers in securities trading portfolios and financial investments, as per bank balance sheets.
Loans (AF.4)	Claims against customers (including mortgage claims), as per bank balance sheets. Valuation adjustment using lending statistics (plus provisions relating directly to loans).
Shares and other equity (AF.51)	Portfolio investment: Shares of domestic and foreign issuers in securities trading portfolios and financial investments, as per bank balance sheets. Participating interests: Participating interests in Switzerland, as per bank balance sheets. Participating interests abroad, as per direct investment statistics.
Units in collective investment schemes (AF.52)	Units in collective investment schemes of domestic and foreign issuers in securities trading portfolios and financial investments, as per bank balance sheets.
Financial derivatives (AF.34)	Positive replacement values, as per bank balance sheets (data as of 2004). Until 2003, includes only counterpart values corresponding to SNB and general government items.
Liabilities	
Transferable deposits (AF.22)	Liabilities towards the SNB, as per the <i>SNB Annual Report</i> . Liabilities towards commercial banks and resident and non-resident customers, as per bank balance sheets.
Other deposits (AF.29)	Liabilities towards the SNB, as per the <i>SNB Annual Report</i> . Liabilities towards commercial banks (including mortgages) and resident and non-resident customers, as per bank balance sheets.
Short-term debt securities (AF.331)	Liabilities from money market paper, as per bank balance sheets.

Long-term debt securities (AF.332)	Medium-term bank-issued notes and bonds, as per bank balance sheets. SIX Swiss Exchange data used for market value adjustments to bonds.
Loans (AF.4)	Loans by the SNB, as per the <i>SNB Annual Report</i> . Loans by mortgage bond institutions and central issuing houses, as per bank balance sheets.
Financial derivatives (AF.34)	Negative replacement values, as per bank balance sheets (data as of 2004). Until 2003, includes only counterpart values corresponding to SNB and general government items.
Structured products (–)	For this item, the entry method for issuers is described in section 2.6.

Commercial bank transactions (deposits and loans) are estimated using changes in stocks. For foreign currency-denominated items, the revaluations resulting from exchange rate movements are also taken into account.

### Other financial intermediaries (S.123)

Most of the information on the financial assets and liabilities of other financial intermediaries is taken from cross-sector sources and from counterparty information.

#### Financial assets

Transferable deposits (AF.22)	Transferable deposits with commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Transferable deposits abroad: Deposits by Swiss investment funds, as per investment fund statistics.
Other deposits (AF.29)	Other deposits with commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Other deposits abroad: Time deposits by Swiss investment funds, as per investment fund statistics; fiduciary investments by other financial intermediaries, as per sectoral classification of bank balance sheets.
Short-term debt securities (AF.331)	Money market paper issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Long-term debt securities (AF.332)	Medium-term bank-issued notes and bonds issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Bonds issued by foreign borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position.
Loans (AF.4)	Loans to banks by mortgage bond institutions and central issuing houses, as per bank balance sheets. Non-bank claims against households, arising out of automobile leasing, as per statistics of the Swiss Leasing Association (SLV/ASSL). Loans to associates and third parties abroad, as per surveys on the balance of payments and the international investment position.
Shares and other equity (AF.51)	Portfolio investment: Shares and participation certificates of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Equity securities issued by foreign borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position. Participating interests: Participating interests abroad, as per surveys on the balance of payments and the international investment position.
Units in collective investment schemes (AF.52)	Units in collective investment schemes of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Structured products (–)	Structured products of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics (data as of 2005).

**Liabilities**

Transferable deposits (AF.22)	Commercial bank balances at clearing houses, as per bank balance sheets.
Long-term debt securities (AF.332)	Bonds issued by mortgage bond institutions, as per banking statistics. SIX Swiss Exchange data used for market value adjustments. Bonds issued abroad, as per surveys on the balance of payments and the international investment position.
Loans (AF.4)	Loans by commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Loans by associates and third parties abroad, as per surveys on the balance of payments and the international investment position.
Units in collective investment schemes (AF.52)	Total claims of all sectors in the form of units in collective investment schemes of domestic issuers.

Other financial intermediaries' transactions (deposits and loans) are estimated using changes in stocks. For foreign currency-denominated items, the revaluations resulting from exchange rate movements are also taken into account.

**Insurance corporations and pension funds (S.125)**

Data on the financial assets and liabilities of insurance corporations are taken from cross-sector sources and from counterparty information, supplemented by data from the FINMA insurance statistics and the balance sheets of Suva and health insurance companies. On an annual basis, FINMA publishes comprehensive information on Swiss insurance corporations. However, since many of these figures include stocks of branches abroad, which are regarded as the rest of the world as far as the financial accounts are concerned, they are not suitable for use in compiling the accounts.

The SFSO pension fund statistics are the major statistical source for pension funds. Until 2004, these statistics were compiled for even years only, so that estimates were required for the odd years until 2003. As of 2005, the surveys have been conducted annually.

**Financial assets**

Transferable deposits (AF.22)	Transferable deposits with commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Transferable deposits with PostFinance, as per SNB estimate.
Other deposits (AF.29)	Other deposits with commercial banks in Switzerland and fiduciary investments abroad, as per sectoral classification of bank balance sheets. Other deposits with PostFinance, as per SNB estimate.
Short-term debt securities (AF.331)	Money market paper issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Long-term debt securities (AF.332)	Insurance corporation investments: Medium-term bank-issued notes and bonds issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Long-term securities issued by foreign borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position. Investments by Suva in long-term securities issued by domestic and foreign borrowers, as per the Suva annual report. Pension fund investments: Direct investments in bonds and medium-term bank-issued notes issued by domestic and foreign borrowers, as per pension fund statistics.
Loans (AF.4)	Domestic borrowers: Insurance corporation mortgage claims, as per insurance statistics. Pension fund mortgage claims, as per pension fund statistics. Pension fund claims against central government and the cantons, as per statistical analyses for general government. Foreign borrowers: Loans by insurance corporations to entities abroad, as per surveys on the balance of payments and the international investment position.

Shares and other equity (AF.51)	<p>Portfolio investment by insurance corporations: Shares and participation certificates of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Shares of foreign issuers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position. Investments by Suva in equity securities issued by domestic and foreign borrowers, as per the Suva annual report.</p> <p>Portfolio investment by pension funds: Direct holdings of domestic and foreign shares and participation certificates, as per pension fund statistics.</p> <p>Participating interests: Participating interests abroad held by insurance corporations, as per surveys on the balance of payments and the international investment position.</p>
Units in collective investment schemes (AF.52)	Insurance corporation holdings of units in collective investment schemes held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Collective (indirect) investments by pension funds, as per pension fund statistics.
Structured products (-)	Structured products of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics (data as of 2005).
<b>Liabilities</b>	
Long-term debt securities (AF.332)	Bonds quoted on SIX Swiss Exchange, as per SIX Swiss Exchange statistics. Insurance corporation bonds issued abroad, as per surveys on the balance of payments and the international investment position.
Loans (AF.4)	Loans by commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Loans from entities abroad, as per surveys on the balance of payments and the international investment position.
Net equity in life insurance reserves and pension fund reserves (AF.61)	<p>Gross premium reserves and allocated policyholder dividends from single and collective insurance contracts, as well as premium reserves relating to unit-linked life insurance contracts, as per FINMA insurance statistics. Tied and untied pension fund capital and equalisation reserves, as per pension fund statistics. Funding gap in the central government pension fund for 2000–2002, as per message on the government accounts, since this funding gap was not included in the actuarial reserve stated in the pension fund statistics.</p> <p>On the financial assets side, all net equity in life insurance contracts (single and unit-linked insurance contracts) is shown as financial assets held by households (S.14). Net equity in pension funds (including collective insurance contracts with life insurance corporations) is divided up between households (S.14) and the rest of the world (S.2) on the basis of the premiums and benefits attributable to these two sectors in 2002. This gives a ratio of 90% to 10% (households to the rest of the world).</p>
Prepayments of insurance premiums and reserves for outstanding claims (AF.62)	<p>Insurance prepayments and reserves for outstanding claims arising from direct non-life Swiss insurance business, as per FINMA insurance statistics. Insurance technical reserves from reinsurance business abroad, as per surveys on the balance of payments and the international investment position. Insurance technical reserves for Suva and health insurance companies, as per their balance sheets.</p> <p>On the financial assets side, all claims against Suva and health insurance companies are shown as financial assets held by households (S.14). Non-life insurance reserves are divided up on the basis of the premiums and benefits in 2002 (households 75%, non-financial corporations 25%; the shares of the remaining sectors are minimal and are therefore not taken into account). Provisions relating to business with the rest of the world are equivalent to financial assets for the rest of the world.</p>

Transactions on deposits and loans of insurance corporations and pension funds are estimated using changes in stocks. For foreign currency-denominated items, the revaluations resulting from exchange rate movements are also taken into account. Transactions relating to insurance technical reserves (F.61) are calculated on the basis of premiums and pension fund contributions, investment income, pensions and capital withdrawals as well as repurchases, as per FINMA insurance statistics and pension fund statistics. Transactions on prepayments of insurance premiums and reserves for outstanding claims (F.62) are estimated using changes in stocks.

### General government (S.13)

Comprehensive statistics for Swiss public finances that conform to international standards are not yet available. The Federal Finance Administration (FFA) is currently adjusting the financial statistics to the IMF *Government Finance Statistics Manual*. The new financial statistics should be available as of 2010 (2008 accounting year). For the time being, the SFSO, in collaboration with the FFA, is preparing special analyses of the existing statistical sources for the financial accounts.

### Central government and cantons

The information on central government and the cantons is mainly derived from the message on the government accounts, the statistics on cantonal finances and the report of the Federal Council on debt trends of public authorities.

In addition to the claims included in the government accounts and the statistics on cantonal finances, the financial accounts also state the claims against the SNB. These include the distribution reserve and the annual result. For further information, see the explanatory notes on the SNB sub-sector (S.121).

Participating interests held by central government are valued in a number of different ways. The figure stated for Swisscom is its market value; those stated for the Ruag technology group, SBB/CFF and Swiss Post are the equity capital in each case (including reserves); for other participating interests the amount stated is the book value, as entered in the central government accounts. Participating interests held by the cantons are stated at book value according to the statistics on cantonal finances.

The discrepancy between the public debt figure stated in the financial accounts and that given by the above-mentioned sources is due to the fact that, in the financial accounts, the central government sector is somewhat more broadly defined than in the government accounts, and that, in the financial accounts, bonds issued are stated at market value, while in the accounts for central government and the cantons, they are entered at nominal value. In addition, Swiss coins issued by central government, accrued expenses and deferred income, special funds, and provisions with a predetermined date of payment and amount are stated as liabilities in the financial accounts, but are not included in the public debt figures published by the FFA. For 2007, further discrepancies arise owing to the introduction of a new accounting model by the central government. In order to avoid a break in series, the revaluations resulting from the transition from the old to the new accounting model have not been included in the financial accounts.

### Municipalities

Data for the municipalities are incomplete. The figures included in the accounts are counterpart items offsetting data recorded under commercial banks and social security funds. The accounts also include municipal bonds quoted on SIX Swiss Exchange.

### Social security funds

The social security funds sub-sector comprises the financial assets and liabilities of the compensation fund for the Old Age and Survivors' Insurance Fund (AHV/AVS), the compensation fund for unemployment insurance (ALV/AC) and the maternity insurance scheme in the canton of Geneva. The AHV/AVS annual reports are the major statistical source for this sub-sector.

### Households and non-profit institutions serving households (S.14 + S.15)

The stocks of financial assets and liabilities of households and non-profit institutions serving households (NPISHs) are derived from cross-sector sources and from counterparty information. No direct data are available for this sector.

#### Financial assets

Currency (AF.21)	Cash denominated in Swiss francs, as per SNB estimate (cf. section 2.4).
Transferable deposits (AF.22)	Transferable deposits with commercial banks in Switzerland, as per sectoral classification of bank balance sheets. Transferable deposits with PostFinance, as per SNB estimate.
Other deposits (AF.29)	Other deposits with commercial banks in Switzerland and fiduciary investments abroad, as per sectoral classification of bank balance sheets. Other deposits with PostFinance, as per SNB estimate.
Short-term debt securities (AF.331)	Money market paper issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.

Long-term debt securities (AF.332)	Medium-term bank-issued notes and bonds issued by domestic and foreign borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Shares and other equity (AF.51)	Shares and participation certificates of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Units in collective investment schemes (AF.52)	Units in collective investment schemes of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Insurance technical reserves (AF.6)	The compilation of this item is outlined in the insurance corporations and pension funds sub-sector (S.125), under the appropriate category.
Structured products (-)	Structured products of domestic and foreign issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics (data as of 2005).

### Liabilities

Loans (AF.4)	Loans by commercial banks in Switzerland, as per bank balance sheets (including liabilities from automobile leasing). Mortgages issued by insurance corporations, as per FINMA insurance statistics. Mortgages issued by pension funds, as per SFSO pension fund statistics. Liabilities towards non-banks arising out of private automobile leasing, as per SLV/ASSL statistics.
Other liabilities (AF.7)	Net liabilities of households towards general government, as per SNB estimate.

Transactions of households are generally estimated using the changes in stocks. For securities (debt securities, shares, collective investment schemes, structured products), revaluations due to share price and exchange rate movements are also taken into account. The compilation of the transactions in insurance technical reserves (F.6) is outlined in the insurance corporations and pension funds sub-sector (S.125).

### Rest of the world (S.2)

The rest of the world does not qualify as a sector in the true sense of the word, since it only includes financial assets and liabilities with respect to the domestic sectors. Consequently, the financial assets of the rest of the world correspond to domestic liabilities towards the rest of the world, while the liabilities of the rest of the world correspond to domestic claims against the rest of the world. Since the domestic sectors include a classification by domestic and foreign financial assets, the statistical sources for the liabilities of the rest of the world are not listed here. Readers are referred to the commentary section on the appropriate domestic sector.

### Financial assets

Currency (AF.21)	Cash denominated in Swiss francs, as per SNB estimate (cf. section 2.4).
Transferable deposits (AF.22)	Transferable deposits with the SNB, as per the SNB <i>Annual Report</i> . Transferable deposits with commercial banks in Switzerland, as per bank balance sheets.
Other deposits (AF.29)	Other deposits with the SNB, as per the SNB <i>Annual Report</i> . Other deposits with commercial banks in Switzerland, as per bank balance sheets.
Short-term debt securities (AF.331)	Money market paper issued by domestic borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Long-term debt securities (AF.332)	Medium-term bank-issued notes and bonds issued by domestic borrowers and held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Bonds issued by domestic borrowers that are not held in custody accounts at domestic bank offices, as per surveys on the balance of payments and the international investment position.

Loans (AF.4)	Loans to domestic corporations, as per surveys on the balance of payments and the international investment position.
Shares and other equity (AF.51)	Portfolio investment: Shares and participation certificates of domestic issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics. Participating interests: Direct investments in Switzerland, as per surveys on the balance of payments and the international investment position.
Units in collective investment schemes (AF.52)	Units in collective investment schemes of domestic issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics.
Insurance technical reserves (AF.6)	The compilation of this item is outlined in the insurance corporations and pension funds sub-sector (S.125), under the appropriate category.
Financial derivatives (AF.34)	Positive replacement values with respect to commercial banks in Switzerland, as per bank balance sheets (data as of 2004). Until 2003, includes only counterparty values corresponding to SNB and general government items.
Structured products (-)	Structured products of domestic issuers held in custody accounts at bank offices in Switzerland, as per securities survey statistics (data as of 2005).

Transactions on deposits and loans are estimated using changes in stocks. For foreign currency-denominated items, the revaluations resulting from exchange rate movements are also taken into account. The calculation method for transactions on insurance technical reserves (F.6) is described in the notes on the insurance corporations and pension funds sub-sector (S.125).

## 2.4 Estimating currency holdings in the different sectors

Figures for SNB, commercial bank and general government currency holdings are based on balance sheet data. The figures for non-financial corporation, household and rest of the world currency holdings are estimates. In order to obtain these estimates, the first step is to divide the figure for banknotes and coins in circulation into a transactions element and a hoarding element. This division is based on internal SNB data on the issue and recovery of banknotes. In a second step, the transaction and hoarding stocks are allocated to the different sectors.

Beginning with transaction stocks, 10% of the total is allocated to non-financial corporations, excluding Swiss Post. Although it is part of the non-financial corporations sector, Swiss Post (including PostFinance) is handled separately because figures on its currency holdings are available. Currency held by commercial banks and general government, as well as coins held by the SNB, is also treated as part of transaction stocks. The remaining portion of transaction stocks (about 60%) is allocated to households.

Hoarding stocks are allocated to households and the rest of the world. It is generally assumed that the share held by the rest of the world is considerable, but there are no indicators that could be used to quantify this share. Consequently, 50% of hoarding stocks are allocated to households and 50% to the rest of the world.

## 2.5 Compilation of liabilities in shares and other equity

In view of the statistical material available, the breakdown of domestic sector liabilities in the form of shares and other equity (AF.51) can only be estimated for financial corporations and non-financial corporations. Classification under the individual sub-sectors for financial corporations is impossible at present because there is no information on the sectors to which the issuers of portfolio investments belong. The estimation process takes as its point of departure the fact that, in the financial accounts, total financial assets in the form of domestic shares and other equity (AF.51) must be equal to total securities issued. The classification of portfolio investment by financial corporation or non-financial corporation is then based on the relative shares of these two sectors in the market capitalisation of SIX Swiss Exchange (free float). In order to obtain a figure for total liabilities in the form of shares and other equity (AF.51), participating interests in corporations in Switzerland held by domestic and foreign agents are added to portfolio investment. For participating interests, the sectors of the issuers are known.

## 2.6 Entry method for structured products

Data on structured products held by investors (financial assets) are derived from securities survey statistics. Structured products issued by domestic banks (liabilities) are recorded in the bank balance sheets. They are not recorded as a separate category, however. It is currently not possible to identify structured products. Yet, it is widely known that only very few structured products are issued in Switzerland due to the fact that they are subject to withholding tax. At present, these are disregarded in the financial accounts. For technical reasons, it is assumed that all structured products are issued abroad.

## 2.7 Statistical sources

The most important statistical sources for the financial accounts are listed below. For further details, reference should be made to the source in question.

### **Swiss National Bank Annual Report**

The SNB *Annual Report* contains an accountability report for the Federal Assembly as well as a business and financial report. It is the major statistical source for financial assets and liabilities of the SNB sub-sector (S.121).

For further information, readers are referred to the SNB *Annual Report*, which is also published on the SNB website at [www.snb.ch](http://www.snb.ch), *Publications*.

### **Banking statistics**

The banking statistics contain data which the SNB collects from banks in order to fulfil its statutory mandate. All banks holding a licence issued by the Swiss Financial Market Supervisory Authority (FINMA) are obliged to report data. Data on commercial banks' financial assets and liabilities (S.122) are derived from their detailed balance sheets. Banking statistics also provide data that can be used for other sectors: the sectoral classification of bank balance sheets and the information on security holdings in custody accounts (securities survey statistics). Consequently, banking statistics represent a major statistical source for the financial accounts.

Further information may be obtained from the SNB publications *Banks in Switzerland* and *Monthly Bulletin of Banking Statistics*, which are available on the SNB website at [www.snb.ch](http://www.snb.ch), *Publications*.

### **Investment fund statistics**

Swiss investment fund managers and the representatives of foreign investment funds in Switzerland provide the SNB with quarterly reports on their asset holdings and the changes in these assets. The investment fund statistics are a major data source for the compilation of financial assets and liabilities in the other financial intermediaries sub-sector (S.123).

Further information may be obtained from the SNB publication *Monthly Statistical Bulletin*, which is available on the SNB website at [www.snb.ch](http://www.snb.ch), *Publications*.

### **Swiss National Bank capital market statistics**

Capital market statistics relate to capital market borrowing in the form of Swiss franc bonds and domestic shares quoted on SIX Swiss Exchange. The financial accounts use data from these statistics to calculate transactions in liabilities arising from corporations' long-term debt securities and shares.

Further information may be obtained from the SNB publication *Monthly Statistical Bulletin*, which is available on the SNB website at [www.snb.ch](http://www.snb.ch), *Publications*.

### **Balance of payments and international investment position**

The balance of payments contains a synthesis of all economic transactions between Switzerland and the rest of the world. The current account records the exchange of goods and services, factor income and current transfers, while the financial account covers financial transactions, including direct investment. The international investment statistics present foreign assets and foreign liabilities as well as Switzerland's net international investment position. This information is required in order to show the cross-border financial relationships of the domestic (sub-)sectors.

Further information may be obtained from the SNB publications *Swiss Balance of Payments*, *Switzerland's International Investment Position* and *Direct Investment*, which are also available on the SNB website at [www.snb.ch](http://www.snb.ch), *Publications*.

### **FINMA insurance statistics**

This data source provides comprehensive information on the business activities of life and non-life insurance corporations as well as reinsurance corporations supervised by the Swiss Financial Market Supervisory Authority (FINMA). For the financial accounts, the data on insurance technical reserves, representing the claims of insured persons, are of major importance.

These statistics are available on the FINMA website at [www.finma.ch](http://www.finma.ch), *Archiv, Bundesamt für Privatversicherungen, Dokumentation, Zahlen und Fakten* (German) or *Archives, Office fédéral des assurances privées, Documentation, Faits et chiffres* (French).

### **Statistics on health insurance**

These statistics provide comprehensive information about the health insurers recognised by central government, focusing on the area of obligatory health insurance laid down in the Federal Act on Health Insurance. This source completes the data for the insurance corporation and pension fund sub-sector (S.125).

Further information may be obtained from the Swiss Federal Office of Public Health (SFOPH) publication *Statistik der obligatorischen Krankenversicherung* (German) or *Statistique de l'assurance-maladie obligatoire* (French), which is also available on the SFOPH website at [www.bag.admin.ch](http://www.bag.admin.ch), *Themen, Krankenversicherung, Statistiken* (German) or [www.bag.admin.ch](http://www.bag.admin.ch), *Thèmes, Assurance-maladie, Statistiques* (French).

### **Pension fund statistics**

The pension fund statistics record the level of occupational pension coverage in Switzerland and review developments in this field. They survey all pension funds under private and public law that provide cover for the financial consequences of old age, death and invalidity.

Further information may be obtained from the Swiss Federal Statistical Office (SFSO) publication *Die berufliche Vorsorge in der Schweiz* (German) or *La prévoyance professionnelle en Suisse* (French), which is also available on the SFSO website at [www.bfs.admin.ch](http://www.bfs.admin.ch), *Aktuell, Publikationen* (German) or [www.bfs.admin.ch](http://www.bfs.admin.ch), *Actualités, Publications* (French).

### **Government accounts**

The government accounts published by central government are made up of the financial account, the income statement and the balance sheet. The government accounts are the major statistical source for the central government sub-sector (S.1311).

Further information may be obtained from the Federal Finance Administration (FFA) publication *Staatsrechnung* (German) or *Compte d'Etat* (French), which is also available on the FFA website at [www.efv.admin.ch](http://www.efv.admin.ch), *Themen, Bundesfinanzen, Rechnung* (German) or [www.efv.admin.ch](http://www.efv.admin.ch), *Thèmes, Les finances de la Confédération, Compte* (French).

### **Financial statistics for public authorities – cantonal finances**

The publication *Kantonsfinanzen* or *Finances des cantons* is the most comprehensive statistical source with regard to the finances of all the Swiss cantons. It is the major statistical source for the cantons sub-sector (S.1312).

This publication is not available on the internet. Bibliographical information: *Finanzstatistik der öffentlichen Haushalte – Kantonsfinanzen* (German, various years) or *Statistique financière des collectivités publiques – Finances des cantons* (French, various years). Berne: Federal Finance Administration.

### **Report of the Federal Council on debt trends of public authorities**

The report presents the debt trends of the central government, cantons, municipalities and social security funds from 1990 to 2004. It also looks at the future development of gross public debt.

Further information may be obtained from the Federal Finance Administration (FFA) publication *Bericht des Bundesrates über die Schuldenentwicklung der öffentlichen Haushalte* (German) or *Rapport du Conseil fédéral relatif à l'évolution de la dette des administrations publiques* (French), which is also available on the FFA website at [www.efd.admin.ch](http://www.efd.admin.ch), *Dokumentation, Zahlen und Fakten, Berichte* (German) or [www.efd.admin.ch](http://www.efd.admin.ch), *Documentation, Faits et chiffres, Rapports* (French).

### **Annual report of the compensation fund for the Old Age and Survivors' Insurance Fund (AHV/AVS)**

The annual report of the compensation fund for the Old Age and Survivors' Insurance Fund (AHV/AVS) comprises the AHV/AVS annual balance sheet as well as the income statements of the AHV/AVS, the disability insurance (IV/AI) and the fund for loss of earned income (EO/APG). It is the major statistical source for the social security funds sub-sector (S.1314).

Further information may be obtained from the AHV/AVS annual report, *Jahresbericht – Ausgleichsfonds der Alters- und Hinterlassenenversicherung* (German) or *Rapport Annuel – Fonds de compensation de l'assurance-vieillesse et survivants* (French), which is also available on the AHV/AVS website at [www.ahvfonds.ch](http://www.ahvfonds.ch), *Jahresberichte* (German) or [www.ahvfonds.ch](http://www.ahvfonds.ch), *Rapports annuels* (French).

### **Facts and figures on leasing**

The Swiss Leasing Association (SLV/ASSL) publishes annual results of a member survey on the leasing business in Switzerland. The publication includes data on investment goods, real estate and automobile leasing. As of 2004, it is included in the SLV/ASSL annual report. This source is used for estimating the leasing liabilities of households towards non-banks.

For further information, readers may consult the SLV/ASSL annual report, *Geschäftsbericht* (German) or *Rapport annuel* (French), which is also available on the SLV/ASSL website at [www.leasingverband.ch/5/SLV](http://www.leasingverband.ch/5/SLV), *Marktübersicht* (German) or [www.assocleasing.ch/46/ASSL](http://www.assocleasing.ch/46/ASSL), *Le Leasing – Faits et chiffres* (French).
