## 2010 Swiss Balance of Payments

The year 2010 was characterised by economic recovery in Switzerland and abroad. The Swiss current account surplus rose by CHF 25 billion to CHF 86 billion, or 16% of gross domestic product. The larger surplus was primarily attributable to net income from direct investment. While improved earnings by foreign subsidiaries resulted in higher receipts from direct investment abroad, the corresponding expenses, i.e. income earned on foreign direct investment in Switzerland, declined. Overall, the surplus in investment income rose by CHF 23 billion to CHF 49 billion. Receipts from exports of goods increased by 8%, while those for services were up by 5%. Expenses for imports of goods also rose, by 11%. By contrast, expenses for services obtained abroad declined slightly, by 2%. Overall, foreign trade in goods and services showed a surplus of receipts over expenses amounting to CHF 64 billion (2009: CHF 63 billion).

In the financial account, a net capital outflow of CHF 92 billion was recorded, compared with CHF 25 billion in 2009. The financial account was greatly influenced by transactions carried out by the Swiss National Bank (SNB). On the one hand, the SNB increased its reserve assets (on a transaction basis) by CHF 138 billion (2009: CHF 47 billion), which led to correspondingly high capital outflows. On the other hand, capital inflows amounting to CHF 31 billion resulted from the reduction in swap and repo business with other central banks and commercial banks abroad. The high net inflows of capital from portfolio investment (CHF 31 billion) were also related to the SNB, as foreign investors made large purchases of money market instruments issued by the SNB (SNB Bills). Direct investment recorded a net capital outflow of CHF 35 billion. Swiss direct investors reinvested profits earned by their subsidiaries abroad, while foreign investors withdrew funds from their subsidiaries in Switzerland. The lending and deposit business of commercial banks resulted in net capital inflows of CHF 15 billion.

### Current account

Foreign trade recovered from the sharp downturn suffered in 2009. In goods trading (special trade), receipts from exports rose by 7% despite the high level of the Swiss franc. Metal industry exports, which had declined particularly markedly in 2009, recovered most strongly (21%). Expenses for imports grew more strongly (9%) than receipts for exports, with imports of raw materials and semi-manufactured goods as well as energy sources recording the greatest increases. The surplus in goods trading (special trade) was down by CHF 1 billion to CHF 19 billion.

19 August 2011

2

In cross-border trade in services, receipts were up by 5%. The most important contributory factor was higher receipts from merchanting business, which rose by one-third to CHF 20 billion. This was due to higher raw materials prices and a relocation of business operations to Switzerland. The increase in receipts from tourism and fees for the use of intellectual property (e.g. licences and patents) was less pronounced. Receipts from bank financial services continued to decrease and amounted to CHF 16 billion; this item has been falling for the last three years. Expenses for foreign travel, bank financial services and fees for the use of licences and patents were lower than in 2009. The only area where expenses were up on 2009 was transportation services. The surplus from trade in services increased by CHF 5 billion to CHF 51 billion.

Income from direct investment abroad (receipts) rose by CHF 19 billion to CHF 72 billion. Not since 2005–06 has such a high level of income been recorded. The earnings position of foreign subsidiaries improved for most industries. By contrast, income from foreign direct investment in Switzerland (expenses) fell from CHF 38 billion to CHF 35 billion. This was primarily due to reduced reinvested earnings (retained profits) of finance and holding companies in Switzerland. Income from portfolio investment in both directions increased from its exceptionally low level of 2009. In the case of income from other investment, both receipts and expenses decreased, although the decline was more pronounced for expenses. The main contributory factor was lower interest rates and capital holdings, which led to reduced earnings from bank interest rate business. Overall, the surplus in investment income rose by CHF 23 billion to CHF 49 billion, and thus was mainly responsible for the strong increase in the current account surplus by CHF 25 billion to CHF 86 billion.

### **Financial account**

Direct investment abroad (capital outflows) increased from CHF 30 billion to CHF 40 billion. Swiss companies mainly invested in existing subsidiaries abroad. Insurance companies were most active, followed by finance and holding companies, although banks also invested considerable sums abroad. The largest amounts were invested in the US and in Central and South America. By contrast, Swiss companies withdrew significant amounts of capital from the EU. Foreign direct investment in Switzerland (capital inflows) amounted to CHF 5 billion, with foreign investors reinvesting earnings in Switzerland and granting loans to their subsidiaries. At the same time, there was some disinvestment, in particular by companies from the EU.

Looking at portfolio investment, for the first time Swiss investors sold more securities issued by foreign borrowers than they purchased (portfolio investment abroad). In net terms, CHF 8 billion flowed into Switzerland, due to sales of foreign money market instruments, the volume of which was higher than investments in shares and bonds. Foreign investors spent a net CHF 23 billion on Swiss-issued securities (portfolio investment in Switzerland), buying mainly money market instruments, in particular SNB Bills.

Banks further reduced their claims and liabilities with respect to banks abroad. This resulted in net capital inflows of CHF 19 billion in interbank operations. Business with customers abroad resulted in net capital outflows of CHF 3 billion. For the first time since

19 August 2011

3

2008, banks were again – on balance – lending to foreign customers. The SNB further reduced its swap and repo transactions with other central banks and with commercial banks abroad. This resulted in net capital inflows of CHF 31 billion. Since the SNB purchased considerable amounts of foreign exchange, reserve assets (on a transaction basis) increased by CHF 138 billion (capital outflows).

For the first time, the Swiss Balance of Payments contains commentaries on the longer-term development of the balance of payments. This is situated at the beginning of the relevant sections and is printed on a grey background. The 2010 Balance of Payments report also includes a special article on longer-term movements in the trade account. The report will be available from 19 August 2011 on the SNB website at [www.snb.ch](http://www.snb.ch), Publications. The printed version may be obtained from the SNB as of 15 September 2011. (Subscribers to the SNB's Monthly Statistical Bulletin will receive the report automatically.)

For further information, please contact Hildegard Muff, Swiss National Bank, telephone +41 44 631 37 05.
