5 Appendix 21
  5.1 History of SNB research 21
Dear Reader

Sound economic research is important for central banks in fulfilling their statutory mandate. The Swiss National Bank seeks to play a leading role in research on Swiss monetary policy and relies on researchers harnessing state-of-the-art knowledge and techniques in all areas relating to central banking.

I would like to share with you in more detail some of the expectations we have of staff members who conduct research. First, they should keep abreast of the latest research findings and regularly exchange ideas and insights with their peers from other central bank institutions. Second, we expect them to have a command of cutting-edge academic methods and their applications. Third, we impress on them the importance of sharing their expertise and results within the bank and with the general public.

We firmly believe that communicating our research activities is essential to ensuring public support and confidence in the professional competence of our institution. For this reason, we have decided to include a reader-friendly summary of a monetary policy paper in this year’s edition.

I am pleased to present the *SNB Research Report* for 2018 and hope that you will find it an interesting and informative read.

June 2019

THOMAS J. JORDAN
Chairman of the Governing Board
This report presents the research activities at the SNB from 1 January to 31 December 2018.

The report is structured as follows:

- Chapter 2 provides a summary of SNB research activities in 2018 and a reader-friendly summary of a monetary policy paper.
- Chapter 3 contains an overview of research publications.
- Chapter 4 lists the research events organised by the SNB.
- The appendix focuses on developments in SNB research over recent years.

Research at the SNB
The SNB bases the analyses used for its monetary and financial stability policy on cutting-edge theoretical and empirical economic knowledge. To this end, it conducts its own research and works closely with the research community – especially with researchers from other central banks. Besides providing insights, research also supplies models, tools and analytical instruments for the preparation and implementation of the SNB’s monetary and macroprudential policy.

Research at the SNB is largely conducted on monetary and international macroeconomics as well as on the economics of banking, other financial institutions, payment systems and financial markets. The SNB does not maintain a centralised research unit. Instead, research work is carried out in various units.

Researchers at the SNB are economists who undertake research projects alongside the main tasks assigned to them within their unit. The SNB supports research activities and promotes the ongoing development of its researchers’ skills.
SNB research activities in 2018

This chapter summarises and evaluates the SNB’s research activities in 2018. Section 2.1 is dedicated to the research publications and section 2.2 outlines the research events. Section 2.3 features a summary of a monetary policy paper.

2.1 RESEARCH PUBLICATIONS

This section focuses on the number of articles appearing in research journals and working papers in 2018 compared to 2017.

Caveat

Note that published research covers only part of the research undertaken by SNB staff. Some research provides direct input into decision-making. As such it is often confidential and may not be published immediately (or indeed, at all).

Articles in research journals

Table 1

| RESEARCH PUBLICATIONS: QUANTITY |
|-------------------------------|---|---|
| Articles in research journals | 27 | 20 |
| Of which SNB Economic Studies  | –  | 1  |
| Contributions to books        | 2  | 1  |
| Dissertations                 | 1  | 4  |

Quality

More than half of the publications were published in D-rated journals (2018: 56%, 2017: 40%). Although two articles were published in A-rated journals, the share of publications published in high-quality journals (A or B journals) was roughly unchanged (2018: 11%, 2017: 10%).

Definition of quality

An article in a high-quality journal is allocated an A or B rating, an article in a good journal a C and an article in a decent-quality journal a D.

---

1 Further information about these research activities can be found in chapters 3 and 4 of this report.
2 The number of articles in research journals and SNB Working Papers published by SNB staff in recent years is provided in the appendix.
3 The SNB offers young staff members the opportunity to undertake a PhD alongside the main tasks assigned to them within their unit.

In 2018, more articles which appeared in research journals were directly related to central banking (2018: 70%, 2017: 35%), but fewer articles were related to the Swiss economy (2018: 56%, 2017: 80%). Overall, all articles were at least indirectly related to central banking.

2.2 RESEARCH EVENTS

An extensive exchange with the research community, especially that of other central banks, is a requirement for research. Table 5 shows some key figures of further research activities conducted by the SNB.

The SNB regularly invites external researchers to present their research results at seminars. In 2018, 37 research seminars were held.

Research visitors give advice, exchange views, hold seminars and may undertake joint research projects with SNB staff. They are only present for a limited period of time. Two researchers visited the SNB in 2018:

– Franz Seitz, Professor at Weiden Technical University of Applied Sciences (Monetary Policy Analysis, 11–30 April 2018)
– Jan Wrampelmeyer, Associate Professor of Finance at Vrije Universiteit Amsterdam (Money Market, 27–31 August 2018)

The SNB also invites experts to give research lectures. This enables SNB economists to keep abreast of topical issues and to remain at the frontier of research. Lectures may include broader topics such as economic history or economic methodology. One SNB research lecture was held in 2018:

– Michel De Vroey, Université catholique de Louvain (23–24 May 2018), on ‘A History of Macroeconomics from Keynes to Lucas and Beyond’

The SNB organises conferences, mostly in cooperation with other institutions, at the SNB or elsewhere. Conferences are an opportunity to present and discuss papers as well as to review research in a particular area. In 2018, the SNB was a member of the programme committee of nine conferences and hosted one conference.
Central bankers and academics are discussing how monetary policy should be implemented in a structural liquidity surplus environment. The paper ‘Exit strategies for monetary policy’, published in the Journal of Monetary Economics by Aleksander Berentsen, Sébastien Kraenzlin and Benjamin Müller, contributes to this discussion by analysing three strategies for controlling interest rates in an environment characterised by excess reserves under two fiscal regimes. The authors add to the literature by showing that the interaction between fiscal and monetary policy is essential when choosing an exit strategy.

2.3.1 EXIT STRATEGIES FOR MONETARY POLICY
Before the 2007/2008 financial crisis, monetary policy was implemented in a structural liquidity deficit. In such an environment, the banking system was kept short of reserves and the central bank steered short-term interest rates by controlling the stock of reserves using open market operations. In the aftermath of the financial crisis, however, all major central banks substantially lowered short-term interest rates and conducted quantitative easing (QE) policies. QE expanded central banks’ balance sheets and created excess reserves, necessitating a change in the way monetary policy is implemented. The authors present a theoretical model for analysing three ‘exit strategies’ that allow central banks to control short-term interest rates in an environment of excess reserves.

1. Leave excess reserves unchanged and pay interest on reserves (IOR, cf. box 1).
2. Absorb reserves via instruments such as reverse repos, central bank bills, or term deposits (cf. box 2).
3. Reverse QE by unwinding asset purchases (cf. box 3).

These strategies have different mechanical effects on banks’ reserves and central bank balance sheets (cf. table 6). The first strategy leaves both unchanged. The second leaves the size of the balance sheet unchanged but reduces the quantity of reserves. The third reduces both the balance sheet and the quantity of reserves. The simulation of the calibrated model based on data from the Swiss franc repo market suggest that the overnight money market interest rate can be controlled with all three exit strategies, although the volatility of the overnight rate is lower with IOR than with all other strategies. As excess reserves are (temporarily or permanently) reduced with reserve-absorbing operations or with reverse QE, money market trading activity re-emerges to the pre-crisis levels, whereas it is close to zero with IOR. In the latter case, this could lead to a potential shortfall of the calculation basis for a transaction-based money market interest rate, serving for instance as an alternative to Libor. Finally, paying IOR and reserve-absorbing operations involve substantial interest rate payments to financial intermediaries. This is not the case for reverse QE.

<table>

</tr>
</tbody>
</table>
The authors analyse the effects of these strategies under two different regimes, ‘full fiscal support’ and ‘no fiscal support’. Under full fiscal support, the central bank chooses its strategy, neglecting the impact on the transfer of the central bank to the government budget. In other words, by adjusting its spending or its tax revenues, fiscal policy must ensure that the consolidated budget constraint of the fiscal and the monetary authority holds. With full fiscal support, policy rates and the inflation target can be chosen by the central bank. If fiscal support is lacking, however, the central bank might need to accept a higher inflation rate to implement a certain interest rate target.

While the results in table 6 hold independently of the degree of fiscal support, the implications for welfare are different. Under no fiscal support, reserve-absorbing operations and reverse QE generate greater welfare than IOR as inflation must be higher to implement an interest rate target with IOR. Under full fiscal support, IOR is welfare maximising, because the opportunity cost of holding reserves is lower than with all other strategies.

Box 1: Interest on reserves (IOR)
Paying IOR allows the central bank to implement a floor for the overnight money market rate, since depository institutions would not lend to their counterparties at a rate below the interest rate.

Box 2: Reserve-absorbing operations
When a central bank wants to decrease banks’ reserves via reverse repo, it sells securities to a counterparty and buys them back at a previously fixed later date. The SNB used (reverse) repos as the primary tool for implementing monetary policy up to the financial crisis.

Central bank bills are interest-bearing debt certificates issued by the central bank; issuance reduces reserves for the term of the bill. Central bank bills can be acquired by depository and non-depository institutions. The SNB issued SNB Bills in combination with reverse repos between 2010 and 2011 to absorb reserves.

Similarly, term deposits drain reserves because they are removed from accounts of participating institutions for the term of the deposits.

Reserve-absorbing operations are referred to as ‘temporary’ because they have to be renewed (rolled over) continuously to keep the level of reserves stable.

Box 3: Reverse QE
With reverse QE, the central bank either actively sells assets or allows assets to mature without replacement. It has the reverse effect of QE: it reduces the central bank balance sheet size and the level of reserves. In contrast to reserve-absorbing operations, the effect on reserves is referred to as ‘permanent’. For the SNB, only an active sale of foreign currency assets against Swiss francs reduces the balance sheet size and the level of reserves.
This chapter contains an overview of articles published in research journals (cf. 3.1), contributions to books (cf. 3.2), working papers (cf. 3.3) and dissertations (cf. 3.4).

4.2 SNB RESEARCH VISITORS

Franz Seitz visited the SNB from 11 to 30 April 2018. Professor Franz Seitz teaches Economics with a special focus on monetary policy and financial markets at Weiden Technical University of Applied Sciences. He is author of numerous articles in national and international journals. His main fields of research are monetary theory and policy, empirical macroeconomics and payments markets, especially cash in circulation. For many years now, Professor Seitz has worked as a consultant on various projects for central banks, commercial banks and financial as well as non-financial corporations.

Jan Wrampelmeyer visited the SNB from 27 to 31 August 2018. Jan Wrampelmeyer is Associate Professor of Finance at the Vrije Universiteit Amsterdam (VU), The Netherlands. He joined the School of Business and Economics in January 2017 and teaches courses on financial markets and institutions and financial data decision analysis (financial econometrics). Prior to joining the VU, he was Assistant Professor at the University of St.Gallen, Switzerland. He gained experience in the financial industry working as risk modeling and analytics specialist in UBS AG’s group-wide Risk Control and Methodology unit. He holds a Ph.D. in Banking and Finance from the University of Zurich and a M.Sc. in Econometrics and Operations Research from Maastricht University. His research focuses on money markets, international finance, risk management, asset pricing and financial econometrics. Jan Wrampelmeyer has published papers in The Journal of Finance as well as The Review of Financial Studies.

4.3 SNB RESEARCH LECTURES

Michel De Vroey delivered the SNB Research Lecture on ‘A history of macroeconomics from Keynes to Lucas and beyond’ on 23 and 24 May 2018. The talks were based on Michel De Vroey’s book of the same name.

Michel De Vroey is a leading expert in the history of economic thought. He is a professor emeritus at the University of Louvain and a visiting professor at the Université Saint Louis in Brussels. He has held visiting positions at the Sorbonne University, Duke University, the University of British Columbia, Vancouver, and Clemson University. He has published several books, including Involuntary unemployment: The elusive quest for a theory (2007) and Keynes, Lucas: D’une macroéconomie à l’autre (2009). He has also published extensively in scholarly journals.
## 4.4 Research Conferences

This section presents the conferences co-organised, managed and/or hosted by the SNB.

### 4.4.1 Joint SNB-BIS Research Workshop

**Date:** 22 March 2018  
**Venue:** BIS, Basel  
**Organising committee:** Leonardo Gambacorta, BIS  
Petra Gerlach, SNB

### 4.4.2 67th Economic Policy Panel

**Date:** 12–13 April 2018  
**Venue:** Zunfthaus zur Zimmerleuten, Zurich  
**Organising committee:** George de Menil, Fondation Nationale des Sciences Politiques  
Hans-Werner Sinn, CESifo  
Charles Wyplosz, Centre for Economic Policy Research (CEPR)

### 4.4.3 8th High-Level Conference on the International Monetary System: Challenges for Monetary Policy and the GFSN in an Evolving Global Economy

**Date:** 8 May 2018  
**Venue:** Baur au Lac, Zurich  
**Organising committee:** Alain Gabler, SNB  
Miriam Rinawi, SNB  
International Monetary Fund

### 4.4.4 15th Annual NBP-SNB Joint Seminar: Macroprudential Stress Testing

**Date:** 25–26 June 2018  
**Venue:** National Bank of Poland, Warsaw  
**Organising committee:** Magdalena Berlinska, National Bank of Poland  
Gilbert Heim, SNB

### 4.4.5 Ausenwirtschaft Workshop 2018

**Date:** 6 July 2018  
**Venue:** Metropol, Zurich  
**Organising committee:** Reto Föllmi, University of St. Gallen  
Alain Gabler, SNB  
Thomas Moser, SNB

### 4.4.6 Karl Brunner Distinguished Lecture by Otmar Issing

**Date:** 20 September 2018  
**Venue:** ETH, Zurich  
**Organising committee:** Thomas Moser, SNB  
Marcel Savioz, SNB
### 4.4.7 SNB RESEARCH CONFERENCE: CURRENT MONETARY POLICY CHALLENGES

| Organising committee  | Dirk Niepelt, Study Center Gerzensee  
                        | Ricardo Reis, London School of Economics  
                        | Marcel Savioz, SNB |
5 Appendix

5.1 HISTORY OF SNB RESEARCH

This appendix provides an overview of the quantity of articles in peer-reviewed journals and working papers written by SNB staff in the last decade.

Since 2008, a total of 246 articles have been published in research journals (cf. chart 1). This corresponds on average to more than 20 articles per year.

From 2008 to 2018, a total of 195 SNB Working Papers were published (cf. chart 2). Per year, the number of SNB Working Papers varied within the range of 10 and 20.
Copyright ©
The Swiss National Bank (SNB) respects all third-party rights, in particular rights relating to works protected by copyright (information or data, wordings and depictions, to the extent that these are of an individual character).

SNB publications containing a reference to a copyright (© Swiss National Bank/SNB, Zurich/year, or similar) may, under copyright law, only be used (reproduced, used via the internet, etc.) for non-commercial purposes and provided that the source is mentioned. Their use for commercial purposes is only permitted with the prior express consent of the SNB.

General information and data published without reference to a copyright may be used without mentioning the source.

To the extent that the information and data clearly derive from outside sources, the users of such information and data are obliged to respect any existing copyrights and to obtain the right of use from the relevant outside source themselves.

Limitation of liability
The SNB accepts no responsibility for any information it provides. Under no circumstances will it accept any liability for losses or damage which may result from the use of such information. This limitation of liability applies, in particular, to the topicality, accuracy, validity and availability of the information.
